EDUCATION

University of California, Los Angeles

BS in Computer Science

September 2023 – Present (expected 2027)

EXPERIENCE

Software Engineer Intern

January 2026 – March 2026

Datacurve

- Architected an end-to-end data pipeline for a frontier AI lab to improve the performance of an LLM on machine learning tasks and delivered reinforcement learning environments
- Performed evaluation of frontier model to determine failure modes to target for data collection, quantifying the importance of each area of improvement
- Implemented comprehensive quality checks on collected data to ensure a high-quality reward for post-training a model
- Interfaced closely with researchers to understand model underperformance and data needs and standards

Software Engineer Intern

June 2025 – September 2025

Vercel

- Implemented request collapsing and origin shielding for Vercel's global Content Delivery Network impacting 25 requests/second, serving them from Vercel's distributed cache instead of the origin server
- Implemented a multilayered locking system which added greater cache coherency and intra-region and node synchronization
- Refactored the codebase to support streaming responses from the Vercel proxy to the client for a faster time to first byte

Software Engineer Intern

June 2024 – September 2024

Vercel

- Streamlined the process of creating and updating backend API services, enabling continuous deployments and reducing the time to deployment from up to a day to a few minutes
- Proposed and developed a reverse proxy handling over 3k requests/second to 80 backend services
- Utilized container orchestration and IaaS technology to manage the deployment of services
- Built a robust alert system for API services ingesting logs from distributed systems and catching 2 incidents
- Wrote internal documentation including an RFC and runbook

Project Lead

November 2021 – September 2023

tRPC

- Led the development of an open-source library making TypeScript server-client communication effortless with RPCs
- Collaborated with others to grow project to 30,000 GitHub stars and 250,000 weekly downloads
- Proposed library upheaval and developed improvements while communicating with users to improve developer experience in a major version
- Developed a codemod for users to easily migrate to newer version of the library
- Built integrations to other frameworks (swr, Vite, Bun, and more) to help users and expand library usage
- Updated large-scale CI system to ensure support for other libraries and frameworks

Software Engineer Intern

June 2022 – August 2022

Tola

- Worked alongside engineers at a startup to make billing more accessible for small businesses
- Built components for the TypeScript/React website and wrote backend API code querying and mutating the database
- Implemented a user notification system for important events, such as when a user's bill is due

TECHNICAL SKILLS

Languages: Go, C++, JavaScript, TypeScript, Python, HTML/CSS, Java, SQL

Frameworks: Kubernetes, Terraform, AWS

Developer Tools: Git, Docker
